Keywords: Service field, service process, efficiency, labor productivity, economic growth, fixed assets, internal factors, consumers.

INTRODUCTION Providing services in the conditions of innovative development of the economy enterprises as a means of determining ways of rational use of resources sources of increasing production (service) efficiency and It is important to study the factors. The current economic reforms are national it is necessary to focus on the effective development of the economy. This is service effective development of the sector and the quality of services provided to the population means to increase and fully satisfy their various requirements. The reforms implemented in our republic are the national economy should be focused on improving efficiency. It is part of it the development of the service sector is calculated and the quality of service to the population increasing it is one of the important directions to meet its various requirements is considered In the analysis of the efficiency of service enterprises assessment of the correlation with productivity has an important place, in which productivity a quantitative approach to determining overall efficiency is a determining indicator. The expansion of service networks is advanced its impact on changes in the composition of the country's gross domestic product is showing. Today, a certain country is among the developed countries to include the service sector in its gross domestic product the share is above 65-70 percent is the main criterion. Our republic at the current stage of economic development, the number of services and the demands placed on its quality are increasing. This is service determining the factors of economic growth in the sectors and economic requires achieving efficiency. Also, service enterprises in the national and international markets increasing the volume of exports due to increasing the position and competitiveness and improving the quality of services is an important factor in achieving economic growth in the sector is considered.

RESEARCH METHODOLOGY AND EMPIRICAL ANALYSIS

In the analysis of efficiency in enterprises, its interaction with productivity assessment of relevance has an important place, in which productivity is general an indicator that defines a quantitative approach to determining efficiency is considered Holistic determination of labor productivity in service enterprises indicators of the gross product and the number of employed persons are used.

The new concept of labor productivity in the current period is the costs reduction-based, time-expanding, efficient and permanent economy of economic resources that have opportunities rather, the quality of the self-development of a person participating in the consumption process consists of changes. Implementation of this concept ranked according to the importance of the release. Prospective social

requires focus on needs. Increase labor productivity gross domestic along with determining the dynamics of production, production output corresponds to the principles of reduction and thus in the conditions of the market economy serves as a criterion for the final results of the management process. Service Macroeconomics of increasing labor productivity in the field of display indicators of social and economic development, their the ability to control compliance with market equilibrium conditions will give.

Calculation of labor productivity in the service industry the amount of gross product created in the network and the total number of people employed in the network the ratio to the number is determined. In the conditions of the innovative development of the economy, our republic has its own the process of services of specialists in the field who are performing their activities high level of professional knowledge and qualification requirements in relation to all features must have. And this is from economic resources in service enterprises to the effectiveness of service in exchange for increasing the efficiency of use ensures achievement and improvement of the quality of services. Quality of services often depends on the methods of production of services. Service display methods, types of service enterprises and organizations and depends on specialization. Working conditions are directly related to the quality of service depends and affects the consumer in this process.

CONCLUSION AND DISCUSSION

Analytical data show that currently labor service sector based on increasing productivity and return on funds ensuring economic growth in enterprises is objectively difficult is showing. Research shows that currently the service in relation to the sphere of material production in the display industries the employment of workers is growing. This is labor productivity leading to a decrease. Our republic is a factor of economic growth in the service sector The analysis shows that there is intensive economic growth in this area the effect of factors (increase in labor productivity and return on funds) is progressive if it was high in the provision of services, economic growth in the sector extensive factors (the number of people employed in the field and the value of basic funds growth) effect was higher in the provision of individual services. In sectors and branches of the economy, in particular, in the service sector determining efficiency requires a comprehensive approach and it is economical requires proportionality of indicators. Such a situation is directly world It is becoming increasingly important in practice.
