Abstract: In our country education in the system school sciences in education from ICT efficient use current is an issue. Exactly information technologies universal tool of education and not only in students knowledge, skill and qualifications formation enable gives, perhaps personal features to develop, to know interests satisfies.

Keywords: Information, initial education, ICT, training and game programs, education system, Internet

As you know, it 's the beginning education - education system foundation considered students teaching quality to him depends will be and this initial school teacher undertake big responsibility loads. Long time during education in the system start drinking school « skills school came, that is student next education get for reading, writing, counting such as main skills mastery need has been education stage as viewed. Today's in the day start drinking school different imagination will be done. Today's education in the day in the system of the child the first experience — education get forces to try place be stay need. This stage activity, independence development, perception reach activity save to stay and child education to the world my table come in to go for conditions create, his health and emotional features strengthening important Today's in the day of students that 's it qualities education to the process ICT current reach with of developing witness we are

Own in our work education to the process information technologies current from them using and study in the process from ICT use according to known experiences collected we are going

Information from technologies use according to my experience traditional lesson within ICT didactic in terms of right applied cases study process individualization and differentiation for not limited opportunities appear to be showed. They are to the students information from sources use enable gives, independent affairs efficiency increases, creativity, competence and skills take over and strengthening for in general new opportunities gives, of education new forms and methods done to increase possibility gives _

Each in the student personal study direction development provides. Study in the process him successful knowledge get for necessary has been main processes as thinking, imagination to develop directed big changes happen will be of students perception reach activities efficient organize to do is provided.

from ICT when used in education person - oriented the approach done increase easy being left, whole study process efficient organize to do opportunity appear it happened Lesson in the

process ready multimedia products and computer education from programs, training and from class except Internet network in works of means using multimedia education programs and presentations, projects was created. Information technologies all study in the sciences apply can In lessons study and game from programs use gives a great effect. Mother tongue and the Russian language in their classes literacy increase according to exercises help gives, in this children on computers different kind of practical assignments they do. Get started classes students for different didactic materials from the collection using demonstration - exercise, control-exercises and test trials modules included mixed computer programs preparation can To him to science about the rules current study and generalized repetition for three in options given grammar-orthographic topics rich on and various districts of materials use gives good results.

Mathematics in the classes « Playful issues » programs prepare and use can Get started in class to be studied many topics according to different materials given Various complexity level different kind of assignments each of the student perception reach and creative abilities to develop help gives _

Issues in solving with a computer animated from the slides use of the lesson interesting increases. Theirs superiority sides wanted at the time of the matter per head Back to can, his separately in parts stop, readers with to talk to them thoughts listening from possible consists of Get started in classes to move animated issues with slide films apply can So slides Create for from the Internet received animated from the pictures use can _

All study in the sciences addition and development materials as many video film and photos with local studies from the material use can _

Microsoft Power Point programs using created presentations education in the process from ICT use very efficient shape is considered In the presentation the main thing is informativeness, visuality, curiosity is considered This is it program through different topic and sciences according to presentations in creating photos, pictures, animation , extra from information use can _

At school there is Internet network in our work big help shows. Internet is global information system the fact that to everyone known. It is electronic mail, search systems own into takes and different information resources use enable gives From him necessary information find, re work exit and them all of them to computers by installing to the children independent pair, group, individual work offer reach can To the students different kind of assignments offer achievement : research transfer, the main thing selection, presentation preparation, schedule to fill opportunity appear will be

Information to get another one method is a lesson during directly from the Internet information get is considered from the Internet from before necessary the material find, in class while him to the students show can Work in the form of a dialogue on the studied material take to go can _

Get started class students from the Internet independent to use, necessary information to choose, him save to stay and presentations make up or different kind of projects work exit and in execution next in their work to use they know Students from the 2nd grade only in the notebook not but directly assignments on the computer do it they get Students computer with work the first skills they get their own theoretical knowledge constant by deepening and practical skills by improving they go

Get started in classes thinking operational style in formation informatics course role very important Informatics this role actions structure planning, information search, communication planning, information models construction, activity mediation such as initial habit and skills collection in the form of is considered. The computer in the winter assistant, creativity, himself expression reach and development tool as to understand big important have Large classes in students thinking style forming will be new forms they are difficulty with acceptance they do This course read the student in SHK information with practical to work to teach need Get started

at school the computer mastering students from his own activities tool as another use in classes possible, the computer apply with take to go lessons them difficulty does not give birth.

large classes informatics in their classes of course from the computer use this program done increase necessary condition is considered From the computer usually new the material discussion in doing electron blackboard as i use From this besides, study games organize to do and individual education and with a computer practicum organize in doing is used. Education as a result students study and simple practical issues solve for from the computer usage : files with simple operations done increase (create, maintain stay, search, program to work drop); in programs practical assignments and creative things to perform know : Word Pad , Microsoft Power Point, Microsoft Excel, Microsoft Word; wide used programs to work download : computer on the screen textual and graph editor, simulators, tests ; texts and images (information), objects with work search is simple changes, storage, use and information and information transmission done increase, content, way directory, catalogs, directories, from the Internet using a computer using small projects and presentations they hurt.

So so, this course start drinking at school learning study process modernization, efficiency increase with together, each individual abilities of the student account take it to stratification possibility gives Offer being carried out course to the teacher education free manage and study information present reach different methods apply enable gives _

Information and communication technologies the students interesting to the world take at the entrance of the teacher opportunities expands, in that students information independent respectively looking for they find, take, analysis they do and to others they deliver. Information about the child with to work , to study in the winter teaching is modern initial of classes important task is considered Get started classes education in the process from ICT use only main directions is formed. Students from class except their work organize in reaching from ICT wide use the first next, this different reports preparation, from the class except events transfer and that's it from the like consists of will be
