**Abstract.** The active transition to the digital economy in Uzbekistan will be one of our top priorities for the next 5 years." Taking the definition of digital economy as "the activity of digital economy in the creation, distribution and use of digital technologies and related products and services, and the electronic generation, collection, storage, processing, transmission and presentation of information in digital technology", in the process of generalization in it, information about the processes of activity in the enterprise is digitized or brought into

**Keyword:** software, electronics, IBM, Xerox, Toshiba, Siemens, Epson, Canon, Panasonic innovation, technical and economic level, efficiency, economic mechanism

### **Introduction**

As you know, in the study of economic activity of trading enterprises, the study of the state of their main funds is considered important, since it contains the main fund of the enterprise, its premises, facilities, technical means and equipment, vehicles, instruments, production inventory and various electronic means in it for the transition to a digital economy in particular.

### **Research methodology**

Currently, more than 12 thousand trading enterprises operate in Samarkand at various capacities. They include department stores, magazines, markets, supermarkets and hypermarkets.

Of these, we carried out scientific research on the organization of the organizational mechanism of the enterprise electronic platform at the trade enterprise Samarkand Shahar Korzinka LLC, which switched to the digital economy at the Samarkand regional trade enterprises.

In particular, research has been carried out on the economic activity of the enterprise in recent years, the effect of its transition to the digital economy, the implementation of digital

technological processes in the activities of the enterprise and the prospect of its development, below we will bring the results of the study.

As you know, in the study of economic activity of trading enterprises, the study of the state of their main funds is considered important, since it contains the main fund of the enterprise, its premises, facilities, technical means and equipment, vehicles, instruments, production inventory and various electronic means in it for the transition to a digital economy in particular.

The results of the study conducted on the electronic platform of the organizational economic mechanics of activities in the digital economy under Korzinka LLC were brought to Table 1.

**Table 1.**  
**Results of research on the organizational economic mechanics of activities in the digital economy under Korzinka LLC**

Name of technological processes	Electronic technician applied to the technological process		Swing coefficient	Major executed operations
	name	number		
<b>Generasia</b>	- electronic control-cash registers; - autonomous control-cash register; - control-cash register passive machine; -POS-terminal; - monoblock POS-terminal; - POS-systems; - electronic scales	64 8 12 9 28 8 52	0,6 0,3 0,2 0,5 0,4 0,6 0,5	It generalizes information in the relationship of the seller and the consumer in various electronic means;  Complex systems are used to the generation process, thanks to which smiles are created on sellers and applicants.
<b>Collection,</b>	fixal  registrar, IBM Pers. computer.	26		The generalised data is collected, logged, and etc.
<b>Saklaš</b>	IBM personal Computer	26		The original el.in the tools, it is temporarily and in personal computers it is disassembled.
<b>Search.</b>	IBM personal Computer	4		The collected jump data Max on various electronic platforms. Executes with programs.
<b>Transmission</b>	Special cables are used	64		Internal and external are trasformed.
<b>Processing</b>	IBM personal Computer	2		New plan, all informations will be curled up from the skate before starting the clay
<b>Usage</b>	IBM personal Computer	26		Promising plans of the enterprise will be fulfilled.
<b>Protection</b>	Protection programs	26		With the help of special programs, the informational is protected.

In the study carried out on the organizational economic mechanics of activities in the digital economy under Korzinka LLC, the application of the main technological processes of the digital economy in the activities of the digital economy was observed, the work carried out on each technological process, the electronic equipment used in the effective implementation of technological processes, their types and head work.

At present, the enterprise employs a total of 120 employees, of which 68 are employed in sales work, and 20 (of which 7 are employed in the warehouse) in the production of the enterprise (itself). As a result of the structural changes in the enterprise sungi years, not only the generation process in the technology of the digital economy, the efficiency of other processes was increased. Especially with the help of personal computers in the administration, the strengthening of External

Communications, the work carried out on the existing International Republican electronic platforms of the enterprise (yutub, Telegram, Yandex, tik tok, etc.) has been repeatedly increased. In this regard, there was a significant increase in the speed of the work of the search, the adoption of timely informations, processing work, the informational base of the enterprise, the bank.

From the above, in conclusion, the existing electronic equipment in the Enterprise each performs its own specific work, through which it is known in different ways depending on the activities of the enterprise. data is digitized, processed, and eventually transmitted electronically to the enterprise server, which form the enterprise electronic platform. Electronic tools, on the other hand, perform various functions on a program basis in a way that suits them.

**The scheme of operation of the control electronic cash register in different modes is presented in Figure 1.**

**Figure -1. Operation of the control electronic cash register machine in different modes.**

Testing mode. In this mode, the performance capacity of the control-cash register and its individual parts is checked. When checking, respectively, the machine keyboard and lock block, the pechat device and the indicator are subjected to test Control, and its technical condition is determined. At such a time, the machine is in an autonomous state, that is, a pre-given check is pechat, and in the calculator mode is an example of control. In such a mode, all accumulations on the machine can be changed, so the work done from entering and exiting this mode must be deleted.

Reporting mode. This mode is used when drawing up reporting documents. In this case, all non-zero data is pechat. The machine can be pitted to several reports, check and control tapes. The mode of disabling or not deleting a report is selected with a key in the working lock.

After the machine key is installed, the report xili is selected: general report, cashier report, interim report, goods valuation code Report, sectional report, cashier report, hourly report, cash Report, etc.

General report. In this mode, a raspechatka of amounts passed through the cash register is obtained. The report summarizes the indicators on sects and cashiers. The report will fix the goods received in each sector, show the total amount of the discount or the amount of additional interest, the total amount and amount of payments or returns, the cash register, the amount of the cash payment or the amount deposited, the cash at the cash desk, the amount of annulation and correction, the number of repetitions, test checks and the amounts collected. The report also shows the receipt of the report and the order number of the check. The report only shows the operas performed.

Cashier's report. After passing the report in this mode, the amounts that have passed through the cash register are deposited. In this case, the indicators for all sectors and cashiers are summed up.

Intermediate report. In this case, the amounts passed through the cash register from the period from which the intermediate report was received are transferred. The fact that the intermediate report is obtained with the fading does not affect the data of other reports. The data is summarized by all sections and cashiers.

Report on commodity valuation codes. In this mode, the amount of goods sold with the price Code of goods is pechat. This also summarizes the data of all sects and cashiers. Such an operation does not affect other reports.

Report on sects. In this mode, the amounts following the data from each section or case to the general report are raspechatka. The data is summed up by all cashiers. Such a report is obtained only at the time of the indelible (deleted) mode.

Cashier's report. The amounts passed through the selected cashier, after the receipt of the general report, are punched. The report summarizes all sectional indicators. The report on cashiers should be obtained only in an indelible mode.

The report on each hour is also executed after the overall report has been received. In this, too, everything is done according to the indicators of sects and cashiers, the reporting period is divided into each hour. The report is executed only in dimmable (not deleted) mode.

Cash report. In this mode, the general report is performed on cash collected in the period after receipt, on cashiers. Information is made on all sections and cashiers. The cash Report is executed in an unquenchable mode.

Fiscalization mode. Each cash register will have a fiscal memory block. In this case, informations are kept about the owner of the cash register, payments in daily sales, the amount received. The average cash register can store 3,000 entries per day in the memory block and 5 blocks of cash register can store the information of the hardware owner's sharing.

The cash register with fiscal memory works in a fixed mode, and the amount of daily payments and tshums (viruchka) is written in its memory by date and time. At the time of trade control, tax control can take the regime of any of the fiscal reports, that is, the general fiscal report, the abbreviated fiscal report and the fiscal report. This requires tax control to enter a password of six numbers.

By General fiscal report, the check and control tape is understood to be the record number of the case opera conducted during this period, the date of the vas utkali viruchka recording information.

In an abbreviated fiscal report, it is understood to give an information of the control-cash register's overall fiscal record within a given period.

In the fiscal report, an information is understood about the work done for the fiscal purpose of this cash register.

To the check and control tape: informational pechat about the number of the first of the day record: the name of the organization, the name of the machine, the code of the owner.

In the same way, we can configure all electronic technical means at the enterprise; autonomous control cash machine, control-cash passive machine, POS-terminals, monobloc POS - terminals, POS-systems and various functions of electronic scales in the same way.
