

The Exhibition at the Nature Center in the Development of Creativity of the Bols is Also the Effectiveness of Practical Methods

Avezova Mastura, Ortiqboyeva Shodiya
Student of the Urgench State Pedagogical Institute

The method (from Greek “metohodos” –path) represents the path that elicits to the goal. The educational method is a way of interaction, aimed at solving the tasks of education, upbringing, development of an individual in the educational process, describes V.A.Slastyanin. In order to increase the effectiveness of the educational process, we use educational methods. Educational methods—a set of methods that are used in the educational process and ensure its effectiveness. There is no single definition of educational methods. The task of the methods is the regulation of the USLS of interoperability activities aimed at solving the educational and educational tasks of educators and educators. Y.I.Perovsky, N.M. Verzulin, Y.Ya. Golant classified the techniques into oral, visionary practical types. Methods are usually easier to learn further if we divide them into 2 types.

Traditional	Modern
Ogʻzaki	Active
Practical	Inactive
Visual Interactive	Interactive

The best period for the development of creativity is preschool age. It is necessary to start developing children's creative abilities as early as possible. In the formation of creativity abilities, of course, we use techniques.

How and with what methods can creative abilities of preschool children be developed?

There are many techniques for developing children's creative abilities. Conversations about the world around, everything that happens around, answers to questions of interest — all this can be used by parents every day. During the daily activities of each child, there should be educational games, mosaics and didactic toys. With a baby, it is necessary to draw, model, read books and listen to musical works. The listed activities not only entertain, but also bring great benefits.

Children's activities in centers: play, Independent speech, cognitive, communicative, cognitive-research, experimental, creative, communicative, labor, productive, musical and artistic.¹

Children's activities in centers: play, Independent speech, cognitive, communicative, cognitive-research, experimental, creative, communicative, labor, productive, musical and artistic.

Activities of an educator:

1. involving children in the world of nature, music and creativity and teaching the child;

¹ F. Qodirova, Sh. Toshpoʻlatova, N. Kayumova, M Aʼzamova. “Maktabgacha pedagogika” Toshkent: Tafakkur nashriyoti.2019. -684b

2. independently acquire knowledge, develop an interest in knowledge, the need to acquire new knowledge, learn and stimulate, at the same time become a subject;
3. Organization of organized activities with children;
4. in the event of difficulties, providing the child with selfless and timely verbal and practical assistance;
5. encourage the child's personal interest;

The use of various methods, styles and forms of play to organize the educational and cognitive process in development centers: conversation, story, show, reading fiction reading encyclopedic literature, review and discussion, explanation, discussion, watching video shows, watching computer presentations, creative activity, research, experiments, experience Secrets of a lively and inanimate nature, etc.;

The development of the child is carried out not only in educational activities, but also in the way of play. During the play and cognitive activities of children in the Centers, the educator monitors the work of children, focusing on how interesting, comfortable and safe the recommended materials are for children. If necessary, the educator will complement or modify didactic materials. The educator ensures that all children in the group visit each Center for five days. Based on observation and analysis, the expected result, Problems, Solutions the educator records at the end of each week the achievements of children to their goals, if so, the problems are determined by the personal work of the educator and children and his parents.

Thus, correctly organized work in development centers allows each child to find what he likes, believe in his strengths and abilities, develop artistic-creative abilities, learn, understand interactions with adults and peers, and assess their feelings and behavior, and it is on the basis of this developing education that lies.

Center for construction, design and mathematics:

Various construction sets - cubes, Legos, blocks, constructors, didactic games for playing and educational materials for the development of elementary mathematical ideas-are used.
