

Primary Class Students' Etiquette in Using Public Information and Communication

Soatmurodova Zebo

Teacher of the 17th school, Termiz city, Surkhandarya region

Abstract:

Science is the basis of development. Neither the state nor the society that does not rely on the achievements of modern science and innovative ideas has no future. We can take Uzbekistan to a new stage of development only at the expense of science and enlightenment, intellectual potential, well-educated personnel.

Keywords: Science, mass media, computers and information and communication technologies, journal, magazine, TV.

Today's teacher is entrusted with the great responsibility of educating an educated, intelligent, well-rounded young generation. It is true that the use of pedagogical tools and modern mass media is considered the best and most acceptable way. In this regard, many changes are being made to the educational process in order to organize educational activities. In this regard, many changes are being made to the educational process in order to organize educational activities. As man is a part of nature, nature and man cannot be separated from each other.

Nowadays, human life cannot be imagined without mass media. Mass media is a means of communication for all people living in our society. At the moment, the use of computers and information and communication technologies increases the effectiveness of classes. The Republic of Uzbekistan "In the national program of personnel training, the issue of informatization of the educational system in order to strengthen the quality of material, technical and information in educational institutions, to provide the educational process with high-quality educational literature and advanced pedagogical technologies Based on this, the use of advanced technologies and mass information communication in the process of educating students in the current developed era is a requirement of the current era.

Nowadays, it is important to highlight the points of the rapidly developing society. This is a complex process, which is aimed at achieving positive results in education, most importantly, forming an intellectual worldview, broadening the scope of thinking, and organizing moral and spiritual quality to the younger generation. It requires the use of a new approach in providing education to children, that is, it is considered reasonable to use social media in the education of children.

Mass media helps to organize activities during classes. study subjects. It is considered the main thing to confirm the exhibition of the exhibition without using it.

In this regard, one of the most effective ways to teach primary education is to use modern technology in the classroom. It is known that primary education is the foundation of the education system. In this regard, a great responsibility is assigned to the teachers of primary

school. The teacher can engage the younger elementary school students in a 45-minute clapping session with ready-made presentations from multimedia products and computer educational programs, and motivate them to learn. In addition, the use of teaching and learning methods in classes is very effective.

A useful collection of didactic materials for primary school students. Partial understanding of computer technologies during lessons for elementary school students in the 1st grade, making them familiar with teaching methods, 2 - from the 2nd grade Students themselves take tests on important topics on computers connected to the Internet without the help of a teacher. Can work.

An example is the international assessment that evaluates the level of knowledge, worldviews, mental capacity, thinking ability, reading literacy of subjects, physical sciences, mathematics, art, etc. In this program, advanced computer skills are required.

Uzbekistan to keep up with the foreign countries that are competing in Rivne

Every father and mother living in the republic, and every teacher teaching the student. It is necessary and necessary for teachers to give lessons to students using information communications effectively during the lessons. In this regard, our country has strengthened the use of traditional media in the Republic of Uzbekistan through legal frameworks. i.e. O'RQ-78-No. 15.01.2007 "Regarding the adoption of the decision on mass media" (new edition). Article 5 of this law mentions the freedom to use mass media. Our state For children, press centers have been established for primary school students and high school students, so that they can use not only computer technology, but also age-appropriate newspapers and magazines. and divided into oral types.

Mass media: journal, magazine, TV. tools such as radio, telephone, computer. And this is a newspaper for elementary school students through mass media. They can publish samples of their works through the magazine or read stories and poems on the topics they like for their youth. It is recommended that they watch interactive games and shows that develop mental activity.

The example given above is considered one of the most effective tools for mastering science not only with older children, but also with younger children, preschoolers, elementary school students, and high school students. While these magazines are in the hands of children, you can familiarize yourself with the poems, stories, collections of articles, stories and news published through the website of this magazine and newspapers. The following are examples of shows that people like to watch on weekends and during vacations:

Khan Academy is a leading provider of free education for people everywhere, a popular website with tons of videos on any topic, and exercises kids can practice to test their knowledge. With a focus on secondary school math, this is one of the best elementary education websites out there.

Scratch is a free programming tool created by MIT, through this site, 7-year-olds can play games, program their games, share how they are programmed, and always give feedback. 'can be plakhlan. In short, his budding computer genius finds his new lover. With this site, kids can get age-appropriate geographic information and brief astronomy information.

Brainscape is based on a system of flashcards optimized to maximize cognitive learning for children, especially effective for language learning and memorizing sentences. If you're into flashcards, it's free and even You can install carefully designed training modules. With a strong focus on reading for our preschoolers, this site will guide you from letter recognition to reading plays, fiction, and comics.

Through this site, children can get interesting information such as interesting facts, jokes, riddles. Many people struggle with math when they start elementary school. And kids with this problem don't want to go to school. But this fun website allows kids to play online math games that teach them basic math functions in a super fun way allows.
