**Annotation:** In this article, the youth, who are the future of our country, should be educated spiritually, morally and physically, and make them active participants in the ongoing reforms. It is devoted to the fact that special attention is paid to the problems of education, upbringing and development of spirituality in solving the socio-political and cultural-educational tasks facing our country.

**Key words:** Spirituality and enlightenment, culture, tradition, Large-scale changes, State policy on youth.

### **INTRODUCTION**

It should be noted that youth is the most sensitive period of human life. Young men and women make up the majority of the population of our country. Ample conditions have been created for their education and occupation. At the same time, organization of meaningful free time of young people is an urgent issue. Society cannot achieve its vision without developing and strengthening moral values in the minds of the youth. "Training of a new generation of personnel capable of solving the complex and large-scale tasks of modernizing our country and building a modern society will continue to be the most important direction of our activity", [1.38] The first president was I.A. Karimov. The more mature the young people are, the stronger their immunity against various foreign diseases. It is known from the historical development of any country that the rapid development of the country, the achievement of certain achievements, and the well-being of the people depend on the level of attention paid to the education and future of the youth in that country. In this sense, the issue of youth in Uzbekistan is one of the most priority areas of state policy. The future and well-being of our planet depends on the kind of people our children grow up to be. Our main task is to create the necessary conditions for young people to show their potential [2]. At the same time, the period of youth is the time when a person stands at the crossroads of life paths. If a person enters the good path at that crossroads, he, his family, his relatives, his people, etc., will face a lot of trouble. It should be noted that the growth and development of our country is due to the peace and tranquility prevailing in our country, and peace does not happen by itself. It is one

of the important tasks of today to tell our population, especially to the growing young generation, about the great virtues of preserving peace and harmony, being tolerant, and showing kindness to each other. is one. The future of every country depends on the moral and educational development of young people. The future of the country is bright, its prospects are bright, its young people are educated and mature in all aspects. It consists of cultural-spiritual views, moral values, traditions, and religious-spiritual feelings instilled in a person from a young age. In this connection, he feels that he is united with his family, relatives, neighborhood, nation, and country, that he is a part of it. As a result, a sense of national pride and patriotism is formed in his mind and heart. In this process, a real citizenship position is formed in a person. As First President I.A. Karimov said, the most important result of any reform is, first of all, the moral and spiritual development of the people.

It is determined by the processes of renewal of his views, the rise of his consciousness, his deep feeling that the changes taking place in the country affect his life and destiny, and he draws conclusions from this. These words show that increasing the social and political activity of young people is one of the most urgent tasks today.

## **DISCUSSION AND RESULTS**

It is known that in 2021, 15-19-year-olds in our country will be 2,569,705 and 2,529-year-olds will be 3,218,218 [3]. It is self-evident that the issue of drawing our attention to the still unresolved problems of our youth, who make up the majority of our population, and turning them into a truly decisive force in our lives, is in the center of our public's attention. Of course, if we bear in mind that this is a huge responsibility for our state, it requires a lot of attention and care. Because now more than half of Uzbekistan's labor resources are young people. The new generation is an important force and a potential resource for the tomorrow of every country, which causes changes in the society and implements creative ideas. Of course, by supporting young people socially, morally and materially, helping them fully realize their rights and obligations, creating favorable conditions for them to occupy a worthy place in society, they become a great force that decides the fate and future of the country. can be converted. Therefore, from the first months of independence, the task of developing a state policy on youth and a mechanism for its implementation was set as one of the urgent issues on the agenda related to the establishment of a new state and society. Today, it is necessary to say with pride that the annual expenses directed to the field of education of our country make up 10-12% of the gross domestic product. However, in the world experience, this indicator does not exceed 3-5 percent on average. Thanks to these funds, hundreds of educational institutions - schools, colleges and lyceums, higher education institutions - are renovated and equipped with modern material and technical facilities every year, and sports complexes are being built even in the remotest villages of our country. All this serves the expansion of the ranks of young entrepreneurs in our country, makes it possible for young people to occupy a worthy place in the life of society, to introduce effective mechanisms of self-employment. The achievement of certain achievements, the well-being of the nation depends on the level of attention paid to the education and future of the youth in that country.

The organizational and legal basis of the state policy on youth can be seen in the activities of organizations working with youth. If we take into account that youth is the force that determines the future of every country, we can witness that in almost all countries of the world, national

concepts for the implementation of youth policy are being developed and effective activities are being carried out. In this sense, the issue of youth in Uzbekistan is one of the most priority areas of state policy. For this reason, youth has been recognized as an active layer of society in all times. During the Eastern Renaissance, the role of youth was incomparable in the activities of moderns and in the renewal of society. In this regard, this stratum, which is formed regularly, requires constant guidance and support... This means that the state should create optimal conditions and opportunities for the free socialization of young people in the interests of the country and effective self-expression, and the system of measures aimed at supporting young people means the state policy related to young people. Therefore, the greatest attention in our country is aimed at raising independent-thinking, enterprising, ambitious young people, and this task is determined by the Law of the Republic of Uzbekistan "On State Policy Regarding Youth", 2017 of the President of the Republic of Uzbekistan No. PF-4947 of February 7, "On the Strategy of Actions for the Further Development of the Republic of Uzbekistan", July 5, 2017, "Improving the effectiveness of the state policy on youth and the activities of the Youth Union of Uzbekistan" on support" No. PF-5106, dated January 25, 2018 "Measures for fundamental improvement of general secondary, secondary special and vocational education system Decree No. PF-5313, as well as many decisions and other legal documents concerning youth. In particular, it is no exaggeration to say that the adoption of the Law of the Republic of Uzbekistan "On State Policy Regarding Youth" was a novelty in the field of creating legal mechanisms for comprehensive support of youth. It is known that this law consists of 4 chapters and 33 articles, which is implemented by the state and envisages the creation of conditions for social formation of young people, development of their intellectual, creative and other potentials. The norms defined in it ensure the rights and freedoms of young people. Also, this law includes additional measures of state support for youth, state support for gifted and talented youth, youth entrepreneurship, and norms for youth social service. For example, the International Olympiad of Young Mathematicians named after the great scholar Muhammad al-Khorazmi was successfully held in Uzbekistan, as a logical continuation of which physics

organization of international science Olympiads named after Ahmad Farghani, chemistry Abu Rayhan Beruni, biology Abu Ali ibn Sina, astronomy Mirza Ulugbek, supporting gifted and talented young people support. Here, in practice today, creativity, presidential schools, the activities of specialized schools, the introduction of gold and silver medals, the winners of the Science Olympiad, Zulfiya, "Brave Boy" and "Future Builder" are the main goals of the introduction of state awards, the vitality of the law. and ensuring its execution. Another important aspect of the law is that it aims to solve important tasks such as creating conditions for young people to engage in entrepreneurship, protecting them from various harmful effects, early prevention of violations. Therefore, from now on, the Law "On State Policy Regarding Youth" will strengthen the rights and legitimate interests of young people in our country, strengthen the responsibility of state bodies and other organizations in the implementation of state policy regarding youth, and create a healthy, well-rounded society in this field. serves to further increase the effectiveness of measures aimed at educating the next generation. Social protection of young people, creating suitable conditions for them to master modern professions, providing them with work and involving them in entrepreneurship are the unique aspects of this program. Support and encouragement of young entrepreneurs, support of talented young people, implementation of creative and intellectual potential is planned. Wide involvement of boys and girls in regular physical education and sports, promotion of a healthy lifestyle among young people, prevention

of delinquency and crimes among minors and young people, mass media and wide development of the effective use of modern information and communication technologies, protection of the rights and interests of young people, support of their aspirations, their spiritual and physical maturity, education in the spirit of love for the Motherland, loyalty to the ideals of independence. As we have set ourselves the great goal of establishing the foundations of the Third Renaissance in our country, we must create the environment and conditions that will educate new al-Khorezm, al-Beruniy, Ibn Sina, Ulugbek, Navoi and Bobur. In this, first of all, development of education and training, establishment of a healthy lifestyle, promotion of science and innovation should serve as the main pillars of our national idea. On the way to this goal, creating ample opportunities and providing comprehensive support for our young people to set big goals for themselves and achieve them should be the top priority for all of us. Only then will the growing young generation become a great and powerful force that will realize the age-old dreams of our people. Currently, a social network called a spider's web has emerged all over the world, and this network has become an integral part of young people's lives. It is now the essence of young people's lives, and they cannot imagine their lives without this factor. This thing has more negative than positive influence on the growth of young people's spiritual image. This is probably the reason why young people are influenced by various foreign ideas, and at the same time, their moral education is disturbed and their mental and psychological effects are negative. Another reason for such a sad situation among our youth is the dependence of our youth on social networks. Because social networks have a strong influence on the spiritual and psychological aspects of teenagers. Adolescents are prone to social outbursts and the virtual world, resulting in dehumanization and nervousness. So, it can be seen that the reason why our young people get into the streets of crime and crime is the widespread information attacks through social networks that affect the human mind, heart and soul. It is known that today in the world there is a sharp struggle and competition, and the conflict of interests is increasing. Globalization processes are creating new opportunities for young people as well as unexpected problems. Threats and dangers against national identity and moral values are increasing. Self-centeredness, lightheartedness towards work and family is masterfully inculcated into the minds of young people in particular. At present, the spiritual image of the youth in our country can be attributed to the education of the youth who do not know the history of the nation. At the same time, we can evaluate the fact that young people have started to adopt the culture of dressing and speaking, which has been promoted by the process of globalization, as a negative effect of the process of globalization. It is also worth noting that young people stick some words on their cars or T-shirts without realizing it, which is one of the important goals of globalization and one of the factors that shape mass culture. That's probably why we see that many young people begin to draw conclusions about an event without thinking or thinking deeply. . Because as Abdullah Awlani said, "Education is a matter of life or death for us, or salvation or destruction, or happiness or disaster" [4.39]

Because the more attention is paid to supporting the young generation in every way, raising them to be spiritually mature, physically healthy, patriotic and selfless, protecting their rights and interests, the more effective it will be. Therefore, Uzbekistan considers the youth group, which is recognized as an active layer of the society, not as a "problem", but as a great strategic resource of the country, which ensures the development of the country. As a result, today highly educated, modern-thinking, determined young people are increasingly becoming a decisive force in the future development of the country.

## CONCLUSION

All the work, material and moral support and attention paid to young people will definitely show results. We believe in it. We support the policy of our President regarding such young people, and we must respond to each of his calls with "labbay". After all, the future of New Uzbekistan is in the hands of young people. It can be concluded from the above that our main goal is to inculcate the ideas of patriotism, humanity and truthfulness in our youth, who are the future of New Uzbekistan. After all, these ideas form the basis of moral education. Therefore, it is more important than ever to form and expand the moral knowledge of our young people at every stage of educational institutions. In addition, by forming a media culture in our young people, we should teach them to use social networks wisely. We need to enrich his moral enlightenment. After all, the education of a generation with a high moral and intellectual potential is disappearing as one of the most important tasks not only in Uzbekistan, but also in the whole world. The future of the country will be determined by the morally perfect generation. Spiritual perfection is the most important factor of the development of the society.
