

Difficulties and Challenges in Teaching Language to Children

Sharipova Feruza Negmatulloevna

Senior teacher of Foreign language department of Bukhara Engineering-technological institute

Abstract

The article discusses some difficulties and challenges in teaching language to children. Several challenges and the ways of overcoming these difficulties have been given.

Keywords: youngsters, children, kids, difficulties, challenges, communication, work-life balance.

Showing small children can represent an interesting arrangement of difficulties, considerably more so when you can't/shouldn't utilize their native language. For a certain something, it's critical to make illustration designs that are both instructive and engaging (fair warning, at Learn with Mummy we take are of that). You additionally should have the option to oversee gatherings of kids who might have various degrees of understanding or abilities. Furthermore, in particular, you should have the option to associate with every understudy for them to truly retain what you're instructing them. All things considered, showing small kids requires somebody who is open to performing multiple tasks while likewise being delicate and mindful enough to perceive when a youngster needs additional assistance or consideration. While there are unquestionably difficulties related with helping English to infants, babies and kids, there are a lot of remunerations as well! Watching your understudies wake up as they begin making associations among words and implications is inconceivably satisfying - for you as well as for the actual understudies! Seeing your learners foster language abilities that will serve them all through their lives is extremely valuable, as is seeing their development in certainty as they become more open to talking before others. At the point when you'll initially see them coming to you, giving their all to communicate in English, since they need to converse with you, you'll be euphoric, and in all likelihood you'll find it hard to accept. Moreover, for ladies (or anybody, as a matter of fact) searching for all consuming purpose balance or a lifelong change, this type of showing offers adaptable hours and a chance for self-improvement and advancement - something that can't be secured in many positions today. The most effective way to instruct English to youngsters and little children is by full submersion, for example by drenching them into significant and sincerely rich encounters that happen only in English. For full submersion to work it should be upheld by the right amount and nature of redundancy and by solid connections. Young children do not care about learning foreign languages, of course, they have no need for foreign languages. To make learning enjoyable it is essential that the experience of learning satisfies their real needs, it must be interesting and stimulating and structured in a way to elicit spontaneous responses from them. It must be emotionally rich, answering to children's basic need to communicate, to feel safe, to have their emotions acknowledged and to learn at their own speed. Each kid is unique and each gathering of youngsters is unique, yet here are a few normal entanglements:

1. Kids don't focus on you and invest their energy meandering around
2. Youngsters continue communicating in their most memorable language during the example
3. Kids figure out how to comprehend what you say in English yet not to effectively talk it

4. Guardians make a good attempt to help and wind up coming down on the youngsters

5. Feeling depleted

Each educator encounters these circumstances occasionally, yet they ought to be exemption, not the standard. If there is desire to instruct English to small kids and conquer the inescapable difficulties, it can be required: Preparing, Instruments, and Backing. Preparing ought to cover how youngsters get familiar with a subsequent language (which is unique in relation to how adults learn) and how to propel kids. Apparatuses ought to be satisfactory for the kids ages and for the goals you need to accomplish: language illustrations won't show them anything, simply perusing books won't train them to talk. Backing ought to come from somebody with experience and from peers, different educators who face comparative difficulties. There are some challenges to teach English to young children:

- children do not pay attention to you and spend their time wandering around;
- children keep speaking their first language during the lesson;
- children learn to understand what you say in English but not to speak it actively.

Seeing their certainty develop as they impart successfully in English brings a deep satisfaction and achievement. The delight and fulfillment you feel when understudies overcome language hindrances and accomplish their objectives make showing ESL an amazingly satisfying and fun undertaking. One of the most widely recognized and squeezing homeroom challenges for instructors is the way that a few understudies are not getting sufficient help beyond the study hall. While educators can work with understudies while they're at school, understudies need support from their folks as well. There are not many professions that have a greater effect than educating. Educators are molding the future, those that will conclude what's to come resembles. As it may be, this respectable work doesn't come without difficulties. Numerous educators face difficulties both inside and beyond the homeroom, frequently causing the vocation to feel overpowering. While the prizes frequently offset the negatives, it's as yet critical to comprehend the day to day challenges instructors face. It can assist guardians and executives with bettering help educators and assist instructors with realizing that they are in good company in their battles. These are ten of the most common challenges that teachers face on a day-to-day basis. While that may seem like a lot of bad news, once the issue is understood, it's easier to find the solution.

Understanding different learning styles- A solitary homeroom most frequently contains understudies with a wide arrangement of learning capacities and styles. It is almost unimaginable for instructors to just utilize one showing technique and have it be successful for their students as a whole. Educators are expected to think decisively while making example arrangements to take care of all the learning styles in their study hall. They additionally must be adaptable while effectively educating, as they make changes continuously founded on understudy execution. This can require some investment and exertion on the educator's end, yet the advantages for understudy execution are magnificent.

Lack of effective communication. Teachers can also face significant challenges when trying to communicate with their students effectively. Not every student, especially at lower grade levels, will know when to ask for help. For example, most high school students are able to effectively communicate their needs, struggles, and triumphs. However, teachers with younger grade levels may not have the same experience. In cases like this, teachers have to find an effective channel of communication so that their classroom can function well.

Now, there's not one answer to this problem. Teachers may need to use different strategies depending on the age of their students. Particularly for teachers that teach multiple grades, this can be a time-consuming task. Finding a system to improve communication in the class can not only help struggling students get support, but it can also help teachers manage multiple students' needs at once.

Staying up to date with learning technology. Learning technology is constantly changing. Every year, there are a slew of new apps, websites, and other technology tools created to improve the learning process. And there is a lot of pressure on teachers to constantly stay up to date with the latest technology. Most believe that the latest and greatest tools will provide the best quality education. But there is often a lack of funding, resources, or time to implement every new technology as it's introduced.

Communicating with parents. One of the most common and pressing classroom challenges for teachers is the fact that some students are not receiving adequate support outside of the classroom. While teachers can work with students while they're at school, students need support from their parents as well. When parents take an active part in their children's learning, that student is much more likely to succeed. This issue also extends to intrapersonal relationships. Students will often feel comfortable turning to a teacher in their time of need—when it's emotional support they are looking for instead of academic support. However, this dynamic can put a lot of pressure on a teacher. The relationship can be tricky to navigate, and teachers often don't have enough hours in the day to check in and talk with every student. Students need to be fully supported both in school and at home in order to have the best chance of success.

Pressure from school administrators. Teachers are often under a lot of pressure by their school administrators to come up with new teaching strategies and ways in which they can improve student learning. School administrators want to remain competitive with other school districts when it comes to performance and test scores. However, teachers are the ones actually in the classroom, teaching students the necessary skills to achieve these outcomes. Teachers are seen as exclusively responsible for student achievement, growth indicators, professional development, and discipline. With so much on a teacher's plate, a supportive school administration can make a world of a difference to both their success and students' success.

Creating engaging lesson plans that fit the curriculum. Creating engaging lesson plans that also align with the state's outlined curriculum can be a tall task. And beyond just being engaging, time-constraints can also be an issue. While there is a syllabus and course schedule to stick to, students will often need additional time to fully grasp a subject. Oftentimes, the state will outline a detailed curriculum for the school year, giving a jam-packed schedule for all the topics that need to be covered in a particular year. Teachers need to rely heavily on problem-solving skills in order to maximize their time in the classroom. Additionally, with larger class sizes, it can be difficult to ensure every student is getting the support they need to fully understand a lesson. Teachers may work incredibly hard to create a great lesson plan that just doesn't resonate with all of their students.

Behavior and classroom management. Student behavior can be difficult for teachers to manage on top of their other job tasks like administrative work, staying on track with the curriculum, and staying up to date with the most recent classroom trends. Creating distinct behavioral and academic plans can help teachers stay on track and meet their educational goals as the school year progresses. But this doesn't happen without a lot of work and support from administrators, parents, and other educational professionals. Oftentimes, motivating students with engaging lessons can be enough to manage student behavior in the classroom. But in some cases, students may need more support to manage behavioral issues and create a growth mindset.

Time-consuming administrative work. The administrative work that comes with teaching takes a lot of time on top of managing students, creating assessments, and actually teaching lessons. Because of this, time management is a vital skill for every teacher. The overwhelming amount of administrative work on a teacher's plate can adversely affect their work-life balance, as they are often required to spend time outside of working hours grading assignments, creating lesson plans, filling out reports, and more. In order to get everything done, some teachers are faced with the question of whether to give up their personal time or their time with students to complete administrative work. While they're always looking for ways to streamline their administrative work, there often seems to be no good answer.

Lack of funding. It's no secret that teachers and schools are constantly facing issues in terms of lack of funding. For most public schools across the country that run into issues with funding, teachers are the ones that are expected to get creative and make do with the resources that they do have. Beyond just a lack of classroom materials, underfunding can also lead to the inability to hire enough teachers. Oftentimes, this is remedied by increasing class sizes. While it may seem like the only solution, large class size can negatively impact the classroom experience for many students. It leaves less time for individualized teaching and one-on-one time with the teacher. This can lower the quality of learning and have a negative impact on student learning. It also negatively impacts the teachers, with them always feeling behind and overworked.

Burnout. Teaching is one of the most demanding professions out there. Teachers are constantly working to juggle all their tasks of educating students, managing behavior, completing administrative tasks, and more. And there's an emotional element, as they know that their work is shaping lives and the future. With the high demand from all their job responsibilities, teachers commonly experience burnout. Some of the common symptoms of burnout include:

- Feeling drained after working on lesson plans
- Dreading going to work
- Lacking the motivation to be productive

Teachers should try to have the best work-life balance as possible in order to avoid burnout, but this can prove difficult with so many responsibilities on their plate. Administrators and parents need to take an active role in education in order to help prevent teacher burnout. Teaching is not for the faint of heart. It takes dedication, time, and grit to stick with it through the difficulties and the hard days. Teachers face a number of challenges while teaching students and even after students leave the classroom. Understanding what teachers are facing can help all of us provide solutions and support to those teaching our children. While demanding, teaching is a very rewarding career choice. Few other people in our society have as much impact as teachers do.
