The Purpose and Content of the Educational Process

Mirzakarimova Maxliyoxon Madaminjonovna

Candidate of pedagogical sciences (PhD),

Senior teacher of Andijan State Institute of Foreign Languages

Uzokjonova Moxinur Diyorbek qizi

Student of Andijan State Pedagogical Institute

Abstract: In this article, which is written about the essence and content of the educational process, we will provide information about what the educational process is, its importance, helping students to develop themselves, what are the principles of education, and similar topics. The process of upbringing further develops human characteristics, and this process is of great importance in the development of a person.

Keywords: education, pedagogy, educational theory, Russian pedagogy, Central Asian practices, cluster composition, intellectual education, moral education, labor education, physical education, aesthetic education, ecological education, economic education, legal education.

The word "education" in the dictionary means "teaching, education". However, the general meaning of the word "education" is understood as "the process of preparing young people as creative, spiritual, knowledgeable, and hardworking citizens." The educational process is based on several important aspects that are of great importance in human life and helps students to develop themselves. Students are divided into small groups and form a cluster on the topic of "Education" or "The Composition of Education." The following can be included in the composition of the cluster.

Education is obligatory in Islam. Education is declared as an obligatory act in our religion. I think that the words "training" and "mentor", which we use most often, are derived from the same root as God's name "Rob", which probably increases the responsibility of educators.

Fitrat adds education to education and calls it "mental education". Also, paying serious attention to bringing a child to a healthy adulthood, i.e., "physical education", and summarizing these three types of education, he simply expresses the "socialization of a person" in modern language: "...child education means raising a child physically, intellectually and morally and bringing him to maturity. That is, to send them to the desert of effort and struggle, that is, to the field of life and death, armed with a strong body, a healthy mind and good morals.

Abdulla Avloni, in his treatise "Turkish Gulistan or Morality", when he approaches child education, divides it into physical, intellectual and moral types, and pays special attention to moral education

Intellectual education: knowledge, skill, experience, understanding; mind, strength, understanding; Moral education: morality, manners, character, kindness, justice, fairness, honesty, modesty, and respect; Labor education: activity, work ethic, entrepreneurship, professionalism; intellectual and physical labor, profit, salary. Physical education: exercise, sports, games; healthy body; Aesthetic education: beauty, dress, cleanliness, walking and moving elegantly; Ecological education: nature, environment, trees, birds, animals; Economic education:

competitiveness, market economy, expenditure, savings, ownership; profit, property ownership; Legal education: citizenship, equality, justice, honesty, crime, punishment, rights and responsibilities.

Education prepares young people for creativity, social and human development. The educational process continues until the end of life and further develops human characteristics. The content and purpose of this process are based on clear and precise principles.

Educational administrators and teachers should help students to develop themselves. To this end, teachers should analyze students' knowledge, engage with their problems and needs, eliminate their curiosity, and use teaching methods that encourage them to learn. Abdulla Avloniy, a knowledgeable person, expressed his ideas on how to convey the essence of education to young people. "Education is a matter of life or death, salvation or destruction, happiness or misery, and success or failure".

Education-pedagogy means the science of educating children. It is necessary to provide a good education for a child's health and success, to form good habits, to establish a profession at a young age, and to teach good manners like a doctor who gives medicine for a patient's illness, and to provide a great deal of guidance to the "good character" of the education center from the inside, above the "cleanliness."

The educational process is based on several important aspects that are of great importance in human life. These aspects include students' knowledge and experience, creative and social development, understanding of human values, the development of confidence and independence, being a useful citizen in society, learning national and world history, and other characteristics.

The text you provided discusses the educational process and the various methods used to help students develop themselves in different aspects, such as their creativity, skills, and social and personal characteristics. The process uses different teaching methods to help students learn and organize their knowledge, and to develop their abilities and talents. The educational process also focuses on developing important qualities, such as kindness, compassion, and moral values, and on helping students become useful members of society. The text also emphasizes the importance of education in personal and intellectual growth, and highlights the role of knowledge, art, and practical skills in achieving this growth.

Education, which is the process of personal and intellectual development, plays a crucial role in people's lives. Its goal is to help individuals become better versions of themselves by promoting positive qualities and eliminating negative ones. The educational process uses different methods to help students learn, organize their knowledge, develop their skills, and improve their social and personal characteristics. It also focuses on promoting ethical and moral values, helping students become useful members of society, and educating them about national and world history.

The theory of education, or pedagogy, is a branch of pedagogy that studies the content, methods, and organization of the educational process. It is based on the experiences of Central Asian scholars and the national pedagogy of the people. The history of pedagogy shows that education and upbringing, as well as the development of the educational process, have not been separated from each other. In the second half of the 18th century, Russia's pedagogy began to focus on upbringing as a separate issue. The first time the word " education" was used as a pedagogical term was in the Russian Academy Dictionary in 1806.

The educational process is a crucial part of personal and intellectual development, and it uses various methods to help students learn and grow. It also focuses on promoting ethical and moral values, helping students become useful members of society, and educating them about national and world history. The theory of education, or pedagogy, studies the content, methods, and organization of the educational process and is based on the experiences of Central Asian scholars and the national pedagogy of the people.
